SUMMARY

AWS-focused DevOps Engineer with hands-on experience in Terraform, CI/CD pipelines, and cloud cost optimization. Designed and automated scalable multi-tier AWS infrastructure, reducing cloud costs by ~32% and deployment time by 65%. Experienced in monitoring and observability using Prometheus, Grafana, and Loki. Passionate about infrastructure as code, automation, and building reliable, production-ready systems.

TECHNICAL SKILLS

Cloud & Networking: AWS (EC2, VPC, RDS, S3, IAM, ALB, Auto Scaling, ECS, ECR, SSM, CloudWatch), Route 53, DNS, Reverse Proxy, Network ACLs
DevOps & IaC: Terraform (S3 Remote Backend, DynamoDB State Locking), Docker, Docker Compose
CI/CD & Version Control: Jenkins, GitHub Actions, GitLab CI/CD, Git
Monitoring & Logging: Prometheus, Grafana, Loki, Alertmanager, New Relics, Mimir
Linux & Scripting: Ubuntu, Amazon Linux, Bash Scripting, Process Management, User Management, Permissions, SSH, Cron Jobs, Systemctl, Package Management, Networking Commands
Development & DB: JavaScript (Node.js, React), TypeScript, Python, MySQL, PostgreSQL, MongoDB

EXPERIENCE

DevOps Intern — IAMOPS, Surat | Jan 2026 – Present

- Provisioned highly available 1-tier, 2-tier, and 3-tier AWS architectures using modular Terraform with S3 remote backend and DynamoDB state locking, ensuring scalable and consistent infrastructure deployment.
- Built CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI/CD and reducing deployment time by 65%.
- Automated start/stop of 40+ EC2 and ECS instances via Jenkins + AWS CLI tag-based management, reducing cloud costs.
- Implemented end-to-end monitoring and logging using Prometheus, Grafana, Loki, and Alertmanager, enabling real-time alerting and faster incident response.
- Configured Nginx reverse proxy, DNS, HTTPS, and Linux servers to enable secure, high-availability application deployment.
- Worked on production-like cloud environments handling real infrastructure automation and monitoring scenarios.

Full Stack Developer Intern — Logiclitz | May 2025 – Jul 2025

- Developed MERN stack applications and implemented CI/CD pipelines for deployment.

PROJECTS

AWS Multi-Tier Infrastructure (Terraform) | GitHub Link

- Provisioned highly available 1-tier, 2-tier, and 3-tier AWS infrastructure using modular Terraform with S3 remote backend and DynamoDB state locking. Implemented secure networking, IAM roles, and automated server provisioning using user data scripts.

Jenkins Automation (EC2 + ECS)

- Developed Jenkins pipelines to automate EC2 start/stop and ECS Fargate scaling using AWS CLI and tag-based resource management. Implemented IAM least-privilege access and scheduled automation to optimize cloud costs.

Docker + CI/CD + ECR Deployment

- Containerized application using Docker and Docker Compose and deployed on AWS EC2. Implemented CI/CD pipelines using Jenkins and GitHub Actions and pushed Docker images to Amazon ECR.

Three-Tier AWS Deployment

- Deployed a three-tier application architecture on AWS with frontend, backend, and database across public and private subnets. Configured Nginx, security groups, and monitoring for secure and reliable application deployment.

EDUCATION

B.Tech-Information Technology, Dharmsinh Desai University | CPI: 7.54 — August 2022 – Present
12th Board GHSEB(HSC), Smt. V.D.Desai(Wadiwala) School | Percentage: 82.61% — May 2022

CERTIFICATION

AWS Cloud Foundations | AWS Cloud Essentials | AWS Networking Core | AWS Serverless | AWS Events-Workflows
